

CCDC Inject

INJECT NAME	Malware Mitigation
INJECT ID	SOFT01A

INJECT DESCRIPTION:

There is a concern that some of our servers may be infected with malware. Select an open-source malware detection tool to install on the Linux and Windows servers in order for them to detect possible infections.

INJECT DELIVERABLE

Respond with a business memo that documents what solution you implemented together with screen shots showing the functioning tool on each server.

Complete a scan, and include in the memo an incidents of malware found by server, in tabular form.
