

# CCDC Inject

<b>INJECT NAME</b>	Proper Network Access Notification
<b>INJECT ID</b>	LEGP01A

## **INJECT DESCRIPTION:**

When network resources are accessed it is important to fully and transparently notify those accessing these resources as to the organization's intentions and rights under the law. Follow the industry best practices for composing the message contents.

Configure all the devices that are configured to accept login requests to notify those accessing that device of these precautions.

## **INJECT DELIVERABLE**

Respond with a business memo that provides the following information:

- 1.) What is the wording of the cautionary statement that you have configured.
- 2.) What devices have you configured this on, together with a sentence describing how you accomplished this, such as command line statements, editing a configuration file, or setting a management GUI feature.
- 3.) Screen shots from one of each platform type (OS, or device) show the warning prior to a login.
- 4.) Clearly identify devices/servers that were not configured.
