CCDC Inject

INJECT NAME	Port Scan External Perimeter with NMAP
INJECT ID	EVAL02T

INJECT DESCRIPTION:
Using a tool, such as NMAP, perform a TCP/UDP port scan of the external connection to your network. This will supply information as to the services that are available to the external world from your network. Create a report that catalogs the available services by host IP address, host name and an assessment as to whether this service needs to be available to the external network.

INJECT DELIVERABLE
1.) A business memo that summarizes how you accomplished the task and what the results where.

2.) Present the results in a table using the following template:

Host Name	Host IP Address	Protocol	Port Number	Application Description	Assessment
