CCDC Inject

INJECT NAME	Understanding Network Data Flows
INJECT ID	DSGN02T

INJECT DESCRIPTION:
Create a network diagram that shows network segments, the devices that interconnect them. Using arrows describe the expected packet flows between the segments. Each flow should represent a particular IP protocol (ie. TCP, UDP) and application (or port number representations of applications).

For example that is a TCP HTTP flow (port 80/443) flow between the segment that hosts a web server and the external network.

INJECT DELIVERABLE
Respond with a business memo that describes the features of the diagram and how to read/interpret it, along with the actual diagram.
