CCDC Inject

INJECT NAME	Configure Centralized Log Reporting
INJECT ID	NETW20T

INJECT DESCRIPTION:
The internal network is composed of Linux and Windows servers, plus a firewall device. Configure a centralized logging solution, so that all the logs from the servers and the firewalls can be viewed and analyzed in one place, with one logging application.

INJECT DELIVERABLE
In a business memo respond with:

1.) Identify the logging tool that you used.

2.) Provide a set of instruction on how you enabled logging to use the centralized repository for a Linux machine.

3.) Provide a set of instruction on how you enabled logging to use the centralized repository for a Windows machine.

4.) Provide screen shots to document:
- The operational state of the central logging application (screen shot showing Records accumulation from various sources.
- Configuration/functionality for a Linux host.
- Configuration/functionality for a Windows host.
- Configuration/functionality for the firewall device.

5.) Enumerate what hosts are reporting to the repository.
