CCDC Inject

INJECT NAME	Secure SNMP
INJECT ID	NETW07T

INJECT DESCRIPTION:
SNMP is an important protocol for use with the Network Management System, however it does create security vulnerabilities.

Secure the SNMP configurations for the firewalls, routers, and servers and preserve the needed functionality for a potential NMS (Network Management System).

INJECT DELIVERABLE
Respond with a business memo that specifically addresses:

1.) How you secure SNMP for Firewall, provide screen shots of the configuration features. Be specific as to implementing SNMPv2c or SNMP3.

3.) How you secured SNMP on Linux servers, provide screen shots for 1 example server.

4.) How you secured SNMP on Windows servers, provide screen shots for 1 example server.

5.) Document any devices not secured, and why.
