CCDC Inject

INJECT NAME	Prioritize Packets with QoS Markings
INJECT ID	TOOL09T

INJECT DESCRIPTION:
Configure the FW device to make QoS markings on packets that represent your scored services. For example, prioritize SMTP and POP3 email connections. Use DSCP markings AF11 through 13 to mark these packet flows, with AF13 being the highest priority.

INJECT DELIVERABLE
Respond with a business memo that specifically:

1.) Prepare a table showing the services, the application they represent (SMTP, HTTP etc…) what packet artifacts are used to identify them (ex. IP address, transport protocol, port number etc…)

Service	DSCP Coding	Artifact to ID Packet

2.) Show a screen shot from the PA that validates the configuration settings that you have made to implement this.
