CCDC Inject

INJECT NAME	Secure In-band Network Management
INJECT ID	NETW15A

INJECT DESCRIPTION:
In-band network management is used by network management systems and provide administrative access to devices on the network. This should be secured such that only authorized network management tools can access this functionality, or if NMS tools are not used, then in-band management should be disabled.

INJECT DELIVERABLE
Respond with a business memo that verifies each network device and the security of its in-band network management.
